NOTES: FOR ALL POTENTIAL PURCHASERS OF VOTING SYSTEMS, PLEASE CAREFULLY READ AND OBSERVE THE GUIDELINES. IF YOU HAVE ADDITIONAL QUESTIONS CONCERNING ANY PHASE OF YOUR POTENTIAL PURCHASE OF A VOTING SYSTEM, CALL THE NASED VOTING SYSTEMS OFFICE CALL FOR INFORMATION BEFORE SIGNING A CONTRACT FOR PURCHASE. (SEE NEXT PAGE FOR ADDITIONAL INFORMATION.)

- Effective Jan. 1997, the software ITA now known as CIBER (formerly Nichols Research, then Metamor) in Huntsville, Alabama, was fully approved as NASED's software ITA. Where the equipment utilizes the software known as FIRMWARE and is machine resident, that firmware has been tested by Wyle Labs to meet the specifications. Effective 2001, an additional software ITA, SysTest Labs was approved.
- Be sure to note the specific models which are NASED qualified. Models which are not identical are not NASED qualified. *Also be sure to pay attention to the Comments section above.*
- NASED does not issue qualifications to vendors. NASED issues qualifications to specific voting systems. Even if one product receives a "qualified" rating, do not assume the one presented to you is the one which was NASED tested.
- Make sure you know, in writing, from the vendor what has and has not been tested. Be sure to be specific -- and make the vendor be specific -- about the version and revision of software. Make them put in writing that the version they are selling you is "identical" to the version which was tested and NASED qualified.
- If there is no Election Management System software listed, then none has qualified for that specific vendor at this point. It is important to have the vendor's election management software tested also to assure that votes are reported correctly.

- ✓ NOTE that the last four digits of any number may vary. The numbers for the last four digits are to show which version of the Federal Voting Systems Standards (FVSS) were used for testing. 1990 means the Federal Voting Systems Standards as adopted and approved by the Federal Election Commission in 1990. 2002 means systems tested to the FVSS as approved by the Federal Election Commission in 2002.
